Description

A homogeneous earthquake catalogue for Bulgaria and adjacent areas covering the period 1981–2019 (including instrumental seismicity) is presented. The catalogue is homogenized concerning magnitude. Regression equations (Solakov, D., S. Simeonova, P. Raykova, I. Aleksandrova, 2018. Empirical relations converting Md and Mp magnitudes applied in Bulgarian seismological routine practice to moment magnitude. Comptes rendus de l'Academie Bulgare des Sciences, 71, 8, 1076-1085 DOI:10.7546/CRABS.2018.08.09) are applied to convert magnitudes used in Bulgarian seismological routine practice (Md and Mp) to the widely used moment magnitude Mw. For stronger events are given moment magnitude estimation (if exist) from [Global Centroid Moment Tensor Catalog](#) (with priority) or [EMSC catalog](#).

The catalogue will be updated annually, including the seismicity of the previous year.
